Push for speed - think brave

- Why does it matter to me? To break the reason of process.

Take risks - seek for new adventures

Ideas usually come up to while I play good games.

Share and accept direct feedback - knowledge

- Joined game with over 10 years of presence – I was working during period of engine rework.

My responsibilities were:

- Old&New Engine Level Content
- Version control | Data Reading | Peer Review
- Creating tickets for Level Editor improvements

Fight BS & Politics - being Honest

- The reason why I left my last job.
-

Set the highest standards - Rule of thumb

- Picadilla was a small studio striving for innovation. Full of critical thinking designers – a great place to play games, brainstorm and prototype new ideas. The team was responsible for crafting level design guidelines in unique match-3 gameplay.

Act like an owner - levels

- Three level designers - three different level events | Main is weak attendance | Costs energy
  - Misleading hearth system | low attendance rate | different energy amount not changing attendance | max booster usage only rewarded
- Recreation of Energy System | On start random amount of moves | 7 levels to beat | Moves Added on Levels 5&7 | Player needs to direct Boosters giving best effect | Noticeable Increase of WinRate
-

Disrupt the status quo - game design guild

- How to force players to do certain actions? Why is game design?
- Attendance in designer sessions where we asked tricky questions.

Put the company’s interest first - travel mobility

This one was the most challenging for me, as my biggest effort lies in breaking barriers.

Traveled to offices 400km from home or beyond the sea. I’m always ready to go abroad!

Think big - think thoroughly

I would like to see game creation as an art form of consequence.

Think long-term - consistency is the key

To predict the exact result is impossible. Having a consistent approach you can expect a constant result. Rules and documentation are the only way can we forecast the immediate excellence.
